Better Together? Social Networks in Truancy and the Targeting of Treatment  
Journal of Labor Economics

Dear Peter,

Thanks for going carefully through the comments and revising the paper. I'm happy you were able to add clarifications and address most of the points of the reviewers. I think the paper makes a very nice contribution and am happy to accept it for publication in JOLE.

Sincerely,

Philip Oreopoulos  
Editor

---

Please pay close attention to the following instructions as you prepare the final version of your paper for the production stage.

#### INSTRUCTIONS ON PREPARING YOUR FINAL SUBMISSION FOLLOWING OUR PRODUCTION GUIDELINES

Please go to <http://www.journals.uchicago.edu/journals/jole/prep-gen> and read the instructions carefully, especially the sections on tables and figures. In addition:

- \* Your abstract may not exceed 100 words in length. You created a short abstract when you submitted the manuscript, but left a longer abstract (103 words) at the beginning of the paper. Please edit or delete this and leave a single < 100 word abstract in place.
- \* JOLE has a house rule against thanking "anonymous referees" in the acknowledgments. If you feel your referee has made an extraordinary contribution to the finished paper, we will write and ask whether the referee will release his or her name to be thanked personally, but this is at the referee's discretion. Likewise, it is assumed that part of an editor's job is to add value to the final article; it not necessary to thank them explicitly.
- \* Pay close attention to the style we use for references, particularly with regard to the use of capital letters, boldface, and quotation marks. Spell out authors' first names as they appear in the published version you are citing. A complete guide to the JOLE reference style is available at : <http://www.journals.uchicago.edu/journals/jole/instruct-references>. Please take this opportunity to go through your references one last time to make sure that every work cited in your text appears in the reference list, and vice versa. This is also a good time to update any entries that have been published or changed since your original submission.
- \* Since the paper edition is published in black and white, make sure your figures will be understandable without color. We will render the color figures in the online edition, though. Note also that you may be required to submit high-resolution hard copies of all figures if the production department finds the current files unusable.
- \* The convention in the Journal of Labor Economics is to include standard errors with parameters rather than t-statistics or p-values. Please follow this convention whenever possible.
- \* On February 1, 2010 the Journal adopted a data availability policy, the details of which are posted at <http://www.journals.uchicago.edu/journals/jole/data-policy>. All authors whose accepted manuscripts were submitted after that date must provide the data or the programs and other details of their computations sufficient to permit replication. These will be posted on the JOLE website. If you worked with proprietary data, please supply instructions to other research for

obtaining permission to use the data, and make available whatever programs you used so that others can replicate your results.

\* Please submit the final version of your paper through the Editorial Manager (it will appear as a submission needing revision). This version is still classified as a revision and you must submit it through the revision interface even though it is accepted. Once the final files have been approved you will receive an official acceptance letter containing the issue assignment and production schedule.

\* Note that a .pdf file is not usable at this stage: you must submit the editable Word or .tex file from which your .pdf was compiled. If you are uploading a .tex file you must also upload all the files that are called out in the main file, such as .bib files, style files, figures, tables, etc. Please insert your tables into the TeX. That will take some of the guesswork out of figuring out which files should be included. If the tables can't be included, the external files should be named sequentially in the order they appear in the text (table1, table2, table3, etc). The same convention would be very helpful for the figures (fg1, fg2, etc).

If you submit a LaTeX file, all figures and tables should be external files that are referenced within the main "ms.tex" file by using appropriate commands. If you are using bibtex to process references please include the ".bbl" file with your LaTeX submission and insert an `input{ms.bbl}` command in the LaTeX file at the place where the bibliography should reside. LaTeX is especially suited for articles containing extensive math; authors of math-intensive manuscripts can use the AASTeX manuscript package available at <http://aastex.aas.org>. Details instructions for preparing LaTeX files for submission through Editorial Manager are available at <https://www.journals.uchicago.edu/journals/jole/prep-latex>.

If you submit a Word (.docx) file, be sure to read the instructions on the website carefully with regard to equations. Equations created in Mathtype are not translatable by our xml converters. Use basic MS Word to create your equations as described on the website.

\* You may upload your data files at this time. Choose the category "data" for these files. You won't see them in the final manuscript but they will be available to readers via a dynamic link.

\* The same is true for web-only appendix material. Appendices that are part of the article and built into the submitted file should be denominated Appendix; those that are available on the web only are called Web Appendix and will not be built into the file. Your short 4-table appendix is currently classified as a text appendix; it will be set in type and printed at the end of the article.

\* Once you have uploaded all the elements of your article, the Editorial Manager will compile it into a PDF file. It will not be submitted to the journal until you accept this file. Please open and look at the file in the Editorial Manager. If it did not compile correctly, do NOT accept it and pass it on to the journal. Do NOT upload a PDF file. Go back and correct the errors. Read the LaTeX instructions above carefully and also look at the folder with suggestions and .sty files.

\* Authors are entitled to two free copies of the issue and one year's free subscription to the journal. Please supply both email addresses and postal mailing addresses for all authors in order to receive these.

Thank you for submitting your work to the Journal. We look forward to seeing your research in print.

Kind Regards,

Maggie Newman, Managing Editor

Abstract:	<p>There is concern the risky behaviors of teenagers, such as truancy, negatively influence the behaviors of others through their social networks. We develop a strategy to use administrative data to construct social networks based on students who are truant together. We simulate these networks to document that certain students systematically coordinate their absences. We validate them by showing a parent-information intervention on student absences has spillover effects from treated students onto their peers. Excluding these effects understates the intervention's cost effectiveness by 43%. We show there is potential to use networks to target interventions more efficiently given a budget constraint.</p>
